

IN THE DRAWINGS

By separate letter to the draftsperson, corrected drawings for Figures 6, 8, 10, 11, 13, 15, 17, 19, and 20 are submitted. The corrected drawings do not add new matter to the application. More specifically, the block labeled "frequency analyzer section 104" is added to each of Figure 6, 8, 10, 11, 13, 15, 17, 19, and 20 in conjunction with the sound source estimation section 116. As argued below, section 104 is described as being part of the sound source estimation section 116 shown in Figure 1, and, in fact, it is part of the aforementioned Figures. Therefore, the changes to these Figures do not introduce new matter into the specification.

Applicants also question the objection to Species VI, and the allegation that the drawings do not depict a present angular amount determining section. Figure 13 of the drawings specifically identifies this claim feature as reference numeral 607, and the objection in this regard should be withdrawn.
